The Menox Driver Test Station – a unique testing tool

There are many groups of customers that in their rehabilitation will be able to test their abilities at the unique Menox Driver Test Station, which has been developed by the company Turvax Ltd Kempele south of Uleåborg (Finland)

When a prototype of the test station was demonstrated in September at Staben in Kalix, it became quite obvious what opportunities there were, based on the testing results, to individually adapt the rehabilitation of impaired, sick and elderly people.

A fully developed version of the Menox Driver Test Station will be a central part of the unique concept The European Rehab Racing Centre Sweden, which has been developed in Kalix with many unique surplus values interacting in order to get a good final outcome.

Those who visit this centre in Kalix will get clear information about their prerequisites for carrying out everyday duties, if it is possible to drive a car or any other vehicle, if the vehicle needs to be individually adjusted, if aids need to be used and if so what type of aid, which rehabilitation to increase motion and strength and a lot more.

The Menox Driver Test Station will give the user a result at the first test, but it is of course important to do several follow-up tests to see if there are any changes, for better or for worse, and hence an alternative need for rehabilitation, support and aid. The test station will become a friend of those who use it as a means to get back to the good life.

- Today there is no centre where people who have met with an injury or illness, that might lead to impairment, can get help in the way that we have planned it, by solving many of their problems under one roof.

Folke Bohman
Project leader

- An innovation always starts with a problem that needs to be solved. Therefore, I'm constantly interested in getting in contact with people who want help to solve their everyday problems.

Juha Paananen
Turvax Ltd
Product developer

- As recently injured, you need all energy to come back. This will take its time to start with, a very long time. If you can shorten that time it's good. I myself want to get back to work and why not to a job where I can help other people in my situation.

Olov Kock
Interested party

Olov Kock is testing the Menox Driver Test Station at the demonstration in Kalix.

- In many counties, there is no traffic-medical centre and this business concept in Kalix can be developed into something really good, and then in cooperation with medical care and medical research.

Lars Jakobsson
Norrbottens läns landsting
Registered neuro-psychologist

- It's a matter of finding the maximum power in all situations, in big and small muscle groups. When we know where the strength is or isn't, we can start rehabilitation for increased motion and other abilities.

Ann Öhman
